DRIVING WITH AUTISM/ADHD /ANXIETY AND OTHER LEARNING CHALLENGES

Our program is specifically developed for the individual needs of each new driver so they have the opportunity to learn how to drive like their peers.

Driving is an essential secondary life skill for both independent living and job retention.

AGE RANGES

Our driving school can certify new Iowa drivers age 18 – 21 to drive. All other new drivers ages 21 and up or from another state will require a DOT drive.

STAGE 1: GETTING THE INSTRUCTIONAL PERMIT

We can help new drivers get their Iowa DOT Instructional Permit. We provide materials to prepare them for the test and can administer the DOT Permit test at home or other quiet setting.

STAGE 2: DEVELOPING AN INDIVIDUALIZED DRIVER EDUCATION PLAN (IDEP)

We set up an initial meeting to discuss the process. Goals are set and we have a discussion about the driver evaluation and driving lessons with the new driver, family and any support counselors or staff. A IDEP is developed based on the goals discussed.

An online self-paced course is included for all students covering the fundamentals of driving, rules and regulations.

STAGE 3: BEHIND-THE-WHEEL INSTRUCTION

Each instructor who provides instruction is either a certified Driver Rehabilitation Professional or Specialist.

We provide specialized individual instruction to each new driver. We try to include as many driving scenarios as possible and include discussions about all types of weather in our training sessions.

Driving Lessons will be coordinated with the student, parent or support counselor or staff.

EXPECTED COMPLETION

Each student driver learns differently.

We estimate most programs can take 3 - 9 months depending on scheduling and progress of the student.

Our goal is to work with the new driver in their home community or other location such as a college campus where they may be attending.

DRIVING WITH A PHYSICAL DISABILITY

SAFER DRIVER SOLUTIONS is the only private driving school with the credentials to provide driver education for teens and adults with a physical disability that prevents them from driving in the traditional manner.

We use specific Training Vehicles that have specialized training equipment installed to address the needs of individuals with physical disabilities to drive.

We develop an IDEP (Individual Driver Education Plan). Our goal is to develop the best instructional plan to enable the driver to be able to resume independent living through a driver's license.

We utilize input from the driver's physician to determine the best recommendation towards driving.

Step 1: We set up an appointment to discuss the needs of the new driver. A Clinical Assessment and Driving Evaluation will be administered. A recommendation is provided with next steps.

Step 2: A Driver Rehabilitation Professional or Specialist works with the new driver.

Step 3: The DRP will write a prescription for the appropriate primary and/or secondary controls for the new driver's personal vehicle.

We will connect the new driver with the appropriate vendors that can install the controls for the vehicle.

Step 4: We will provide additional instruction and training on the newly installed equipment.

All lessons will happen in the new driver's community

TESTIMONIAL

We would highly recommend Andy as a driving instructor for your student.

Our daughter Kate began working with Andy while she was attending college. She set driving and obtaining a license as a goal for herself upon graduation. COVID challenged that goal, but Kate and Andy continued to work together until she passed the driving test.

Andy has the professional skill set and patience to work with drivers that need some extra time and encouragement to safely learn to drive.

Kate reached her goal of getting her driver's license and that would not have been possible with out Andy's help.

Dave, Maria and Kate Wood (U of I graduate)
